

When Korea's largest carriers needed smart delivery management, they turned to KOAMTAC's KDCs to track deliveries at both ends of the shipment, and then deliver key information instantly, in real-time, to clients.

The top four couriers in Korea – Hanjin Express, Hyundai Logistics, CJ GLS and CJ Korea – are integrating KOAMTAC's KDC Bluetooth barcode scanners into their smart delivery management system. Their KDCs of choice are the KDC200 and KDC250 Bluetooth barcode scanners used in partnership with smartphones.

KOAMTAC's KDCs are the smallest Bluetooth barcode scanners with a display on the market today, and yet are rugged and powerful. They have a proven track record of durability and dependability in the field and are integrated with the latest GPS and 3G wireless technologies.

Worker fatigue can be a problem in the warehouse or on the loading dock, with long hours of repetitive motion tasks with heavier devices that can cause injury or burnout.

KOAMTAC's ergonomically-friendly KDCs make scanning much easier. Our company also offers an innovative ring scanner that can be used with a Bluetooth headset that allows hands-free scanning. Workers can wear the scanner around the neck or put it in a pocket.

KOAMTAC's entire product line stands out ahead of the competition when it comes to managing couriers, shipments and deliveries worldwide.

Reducing worker fatigue and room for error, saving time and saving trees- KOAMTAC's KDC100 is the perfect partner for retail solutions and for making a greener world.
