

FOR IMMEDIATE RELEASE

KOAMTAC Announces Upgrade to KoamTacON, a Web-Based App Development Solution for Data Collection

The latest update of the convenient and low-cost Mobile Enterprise App Platform includes additional operating system support, the ability to create a custom user interface, and advanced in-app functionality, helping companies to save time and costs by creating data collection apps in-house.

Princeton, N.J., Sept xx, 2016 - KOAMTAC®, Inc. has announced an upgrade to KoamTacON®, an innovative web-based client/server solution for application development. KoamTacON enables users to develop and customize data collection applications tailored to exceed company needs and expectations. This innovative application is invaluable to companies in any vertical market segment, including Distribution & Retail, Healthcare, Transportation & Logistics, and Event Technology.

With KoamTacON, users have the ability to create their application in a web-based portal before downloading and synchronizing the application to other smartphones or tablets. The data may be transferred to the completed application by using a KDC® Bluetooth barcode scanner or through manual input and will synchronize with the web-based portal in real time. Within the application, users may also customize reports and run an analysis for all the collected user data.

“KOAMTAC’s full data collection eco-system continues to exceed expectations in application building, barcode, RFID, and payment technologies, and this update only strengthens the eco-system for future evolutions,” stated Dr. Hanjin Lee, President & CEO of KOAMTAC, Inc.

As part of the update, KoamTacON now supports Windows® 10 mobile in addition to Apple® iOS and Google® Android™. While the design concept enables the application builder to control workflow, pre-defined application templates are being added to take the guesswork out of application development. The flexibility of these templates allow the builder to create an app to fit their company’s unique needs without development training.

While KoamTacON remains simple enough for anyone to build an app, the latest update also supports JavaScript, allowing for advanced customization and interactions. This is great news for companies with a desire to connect the app with their current database or to interact with native phone applications such as the phone or browser. Additionally, JavaScript creates an advanced User Interface for displaying messages or alerts and increasing options for selection.

Both new and existing KDC customers have access to a free one-year subscription for KoamTacON. After the free subscription expires KDC customers have the option to purchase a subscription for \$9.95 per month/per user or \$99 per year/per user. The application builder is also available for non-KDC customers at a subscription cost of \$9.95 per month/per user or \$99

per year/per user. Anyone can sign up to experience KoamTacON by filling out the request form found at <https://koamtac.com/koamtacon/>.
